

Launch-readiness checklist

Tick these before you publish. Grouped by priority. Details for each live in the linked docs.

● Blockers: do NOT launch until these are done

- ☐ **Build the master sheet** in your Google account (`README.md` → build the master). Add all four files: `Code.gs` , `Api.gs` , `Sidebar.html` , `WebApp.html` . Run ⚡ **CRM** ▶ **Set up / rebuild database**.
- ☐ **Deploy the web app** once as **Execute as Me · Only myself** (`DEPLOY.md`). Confirm the app opens.
- ☐ **Run the FULL smoke test** on that live account, every section A–L of `SMOKE-TEST.md` . This is the #1 gap: most features have never run live. Specifically verify:
 - ☐ Quote → Approve → Invoice draft + **Job** created
 - ☐ Send estimate & invoice PDFs (they generate and email)
 - ☐ Recurring job **rolls forward** when marked Done
 - ☐ Review-request, follow-up digest, and appointment-reminder **emails actually send**
 - ☐ Daily automations install (3–4 triggers) and fire
 - ☐ Lead **Form** submission lands in Leads
 - ☐ Scheduling a job auto-creates its Google Calendar event
 - ☐ Rebuild guard warns before erasing
- ☐ **Email deliverability**: send a test invoice/review email to a **non-Google** address; confirm it lands in **inbox, not spam**, and looks right.
- ☐ **Security settings verified**: deployed **Only myself**; the master sheet contains **no real customer data** before you share it (`SECURITY.md` , `DATA-SECURITY.md`).
- ☐ **Payment + shop accounts**: Etsy shop (ID verified) and/or Gumroad, **payout connected**.
- ☐ **Build the variants** you plan to sell (Cleaning / Lawn Care) and smoke-test each (`variants/README.md`).

● Should do: meaningfully improves your odds

- ☐ **Listing images**: use `assets/etsy-thumbnail.png` as the **first image (thumbnail)**, then `webapp-home.png` , `crm-invoice.png` , `crm-dashboard.png` , `crm-leads.png` , and the niche shots. (Add quote-builder / invoice-detail shots once deployed.)
- ☐ **Demo video** (Etsy/Gumroad convert better with one): screen-record the deployed app using `VIDEO-SCRIPTS.md` .
- ☐ **First-reviews plan**: launch at **\$49** to seed reviews, and line up a few early buyers; drop links in the community posts (`LISTINGS.md`).

- ☐ **Delivery files ready:** delivery PDF (copy link filled in) **and** the 6-taps deploy card, uploaded to both stores (`PACKAGE.md`).
- ☐ **Decide the DFY logistics** (\$149): you can't deploy in a buyer's account; it's brand + configure + a **guided** deploy (see the seller note in `LISTINGS.md`).

Awareness: know before the money comes in

- ☐ **Your income is taxable:** track sales; Etsy/Gumroad usually handle *sales* tax, not your *income* tax.
 - ☐ **Platform dependency:** the product rides on Google Apps Script; a Google change could require an update. Low probability, worth knowing.
 - ☐ **Setup/deploy is your #1 support driver:** be ready to answer same-day; lean on the deploy card + DFY tier.
 - ☐ **Refunds:** digital, "no refunds once delivered" stated, but honest listings (the "please read before buying" block) are what actually prevent disputes.
-

Already done (for your confidence)

Product built (sheet + web app) · bug review (×2) · expert product-fit review · UI/UX review (contrast/accessibility) · voice-of-customer market review · cybersecurity review + fixes (formula injection, email escaping, clickjacking) · data/privacy review (verified: **no AI / no third-party egress**) · full packaging (Etsy + Gumroad copy, delivery PDF, deploy card, playbook) · privacy assurances surfaced to buyers.

The gate to launch is the top red block, especially the full live smoke test. Everything else is polish or awareness.
