

Packaging & selling Service Pro CRM (Etsy + Gumroad)

Everything you need to list, deliver, and fulfill, all turnkey. Read top to bottom once.

1. What the product IS (one line)

A complete CRM **app** that runs in the buyer's **own Google account**: leads, quotes, invoices, jobs, clients, automatic Google-review requests. **One-time price, no subscription, your data never leaves your Drive.** Works on phone and computer.

2. What the buyer receives

- A link to **make their own copy** of the master Google Sheet. All the code files (`Code.gs` , `Api.gs` , `db.gs` , `setup.gs` , `WebApp.html` , `Sidebar.html`) and every tab **travel with the copy**; they never paste code.
- A 1-page **Start-Here PDF** (the delivery file) with the copy link + setup/deploy steps.
- The full **user manual** (`TRAINING.md`), included with the delivery.
- Their own private **web-app URL** they deploy once (~5 min) and add to their phone.

3. One-time seller setup: build the master (~20 min, once)

Do this a single time; every sale is a copy of it.

1. Follow `README.md` → "How to build the master": create the sheet, add the code files, run ⚡ **CRM**
 - **Set up / rebuild database**, approve permissions.
2. **Deploy the web app** yourself once (`DEPLOY.md`) and run through `SMOKE-TEST.md` so you know a fresh copy works end-to-end.
3. Fill Settings with neutral placeholder values (buyers overwrite them).
4. `Share` ▸ `General access` ▸ `Anyone with the link` ▸ `Viewer` → **copy that link.** → This is the **copy link** you deliver. (Buyers click it → `File` ▸ `Make a copy.`)

Make **three masters** if selling all editions: Universal, Cleaning, Lawn Care (swap the CONFIG block per `variants/README.md`). Each gets its own copy link.

4. Build the delivery file (once per edition)

1. Open `delivery-template.html` , replace `{{COPY_LINK}}` (both places) with that edition's copy link.
2. Print to PDF (Letter). That PDF is what you upload to Etsy/Gumroad. (Sample: `assets/Service-Pro-CRM-Delivery-SAMPLE.pdf` .)
3. Also print `deploy-card.html` to PDF and include it, a one-page "Turn on your app in 6 taps" quick card that makes the buyer's only technical moment painless. (Sample: `assets/Deploy-Card-SAMPLE.pdf` .) Both platforms let you attach multiple files.

5. Fulfillment per sale: ~0 effort

Because the copy link is generic and reusable, **you don't customize anything per order**.

- **Etsy:** the buyer auto-receives your uploaded Start-Here PDF (which contains the copy link). Nothing to do per sale.
- **Gumroad:** same PDF is the product content. Nothing to do per sale.
- Only the **\$149 done-for-you** orders need action (you build + deploy for them).

6. Pricing (both platforms)

Item	Price
Service Pro CRM (core)	\$69 (launch at \$49 to seed reviews, then raise)
Cleaning / Lawn Care editions	\$69 each
Done-For-You setup + deploy	\$149

The DFY tier matters: deploying the web app is the one technical step, so non-technical buyers will happily pay you to do it. High margin; it's just you.

7. Etsy listing

- **Type:** Digital download. **Delivered file:** the Start-Here PDF (contains the copy link).
- **Title / tags / description:** in `LISTINGS.md` (Etsy section).
- **Images (5–10):** from `assets/` : lead with `app-home.png` (the app), then `app-client.png` (shows Maps directions), `app-billing.png` , `app-jobs.png` , `app-settings.png` . (Niche-edition shots can be regenerated per edition.)
- **Fees:** ~\$0.20/listing + 6.5% transaction (\$4.70 on \$69).
- **Keep the "please read before buying" honesty block** in the description; it's the #1 refund-preventer (Sheets-based app, email not SMS, one-time Google approval + deploy step).

8. Gumroad listing

- Create product → **price** → upload the **Start-Here PDF** as the content (safer than a bare redirect; it carries the instructions and the copy link).
- **Cover images:** same `assets/` shots; Gumroad shows a gallery.
- **Fees:** no listing fee; ~10% + card processing. No KYC friction.
- **Traffic:** Gumroad brings *none* on its own; pair it with the ready-to-post community blurbs in `LISTINGS.md` (drop the Gumroad link in the comment).
- Optional: turn on ratings; leave "generate license keys" off (not needed).

9. Asset inventory (what's in this folder)

File	Use
<code>Code.gs</code> , <code>Api.gs</code> , <code>db.gs</code> , <code>setup.gs</code> , <code>WebApp.html</code> , <code>Sidebar.html</code>	The product (paste into Apps Script)
<code>delivery-template.html</code>	Buyer Start-Here doc → fill copy link → PDF
<code>deploy-card.html</code>	"Turn on your app in 6 taps" quick card → PDF (bundle it too)
<code>assets/app-home.png</code> + other PNGs, <code>*-SAMPLE.pdf</code>	Listing images + sample delivery
<code>README.md</code>	Build the master + fulfill
<code>DEPLOY.md</code>	Deploy the web app (+ multi-account troubleshooting)
<code>SMOKE-TEST.md</code>	Verify a fresh copy end-to-end
<code>TRAINING.md</code> , <code>VIDEO-SCRIPTS.md</code>	Buyer manual + recordable walkthroughs
<code>LISTINGS.md</code>	Etsy + Gumroad copy, tags, launch posts
<code>variants/</code>	Cleaning / Lawn Care editions
<code>ROADMAP.md</code>	What's built / deferred / out of scope

10. Refund-prevention checklist (do these)

- ☐ Honesty block visible in **every** listing (what it is / is NOT).
- ☐ Offer the **\$149 DFY** tier for anyone who doesn't want to deploy.
- ☐ Support line = "reply to your order message" (same-day).
- ☐ Confirm your master passes `SMOKE-TEST.md` before publishing.

11. Terms (put a short version in the listing + the delivery PDF)

Digital product: **single-user license**, for the buyer's own business use. **No refunds** once the file/link is delivered. Not affiliated with Google; requires a free Google account.
