

⚡ Service Pro CRM: Google Sheets + Apps Script

A complete customer & job manager for service businesses (cleaners, landscapers, detailers, contractors, trainers, handymen, HVAC, pool techs, movers, and more). It lives entirely inside the **buyer's own Google account**: no subscriptions, no servers, no data leaving their Drive.

This is the **product master**. Each sale is a *copy* of the finished sheet.

What the buyer gets

It's an **app** (a private web-app URL) backed by a Google Sheet. Daily work happens in the app: **Home / Clients / Jobs / Billing / More**. The sheet holds the data across these tabs:

Sheet tab	What it stores
Clients	Contact book; status (Lead/Active/Inactive/Lost), address, follow-up date; lifetime spend auto-calculates from paid invoices.
Jobs	Scheduled work: date, time , service, status, a Recurring field, and a <code>CalendarEventID</code> linking each job to its Google Calendar event.
Estimates	Quotes (Draft/Sent/Accepted/Declined) with snapshotted tax + cached totals.
Invoices	Invoices (Draft/Sent/Paid/Overdue) traceable back to their estimate.
LineItems	Itemization for any estimate/invoice (snapshot description + rate).
Services	Your price book: service names + default rates.
Business Settings	Business info, currency, sales tax %, numbering, review link, payment link, Google Calendar sync toggle + default job length, accent color, logo.

Actions & automations (Apps Script):

- **Local-first web app**: leads, clients, jobs, estimates, invoices, dashboard; instant on phone + desktop.
- **Estimates → invoices**: itemized branded **PDFs** with sales tax and a Pay-now button, emailed to the client; **Approve → invoice + job** in one tap.
- **Google Calendar sync**: scheduling/rescheduling/cancelling a job automatically creates/updates/removes its calendar event (client address as location). Toggle in Settings.
- **Maps directions**: one tap from a client's address opens Google Maps directions.

- **Recurring jobs:** `rollForwardRecurringJobs` auto-creates the next visit when a recurring job is done.
- **Review requests, follow-up digest (tap-to-text), appointment reminders, overdue-invoice flagging:** daily-trigger autopilot.
- **Mobile lead-capture Google Form:** `createLeadForm` builds a phone-friendly form that feeds Clients as new Leads.

Container-bound project: the code files (`Code.gs` , `Api.gs` , `db.gs` , `setup.gs` , `WebApp.html` , `Sidebar.html` , optional `Tests.gs`) all travel with any copy of the sheet.

How to build the master (one-time, ~5 min)

1. Create a new Google Sheet named **Service Pro CRM MASTER**.
2. `Extensions` ▶ `Apps Script` . Add these files (or `clasp push` them; see `CLASP-SETUP.md`):
 - `Code.gs` (paste over the stub): menu, automations, triggers, Form intake
 - `Api.gs` (new script file): the web-app server API + calendar sync
 - `db.gs` (new script file): schema + data layer
 - `setup.gs` (new script file): builds/rebuilds the tabs
 - `WebApp` (new **HTML** file): the app UI
 - `Sidebar` (new **HTML** file): the desktop Quick Actions panel
 - `Tests.gs` (optional): in-editor integration test Save.
3. Back in the sheet, reload the tab. A ⚡ **CRM** menu appears.
4. Click ⚡ **CRM** ▶ **Set up / rebuild database**. Approve the auth prompt once.
5. The 7 data tabs (+ hidden `_meta`) build themselves. That's the sheet/master.
6. **Set the timezone** (`Apps Script` ▶ `Project Settings` ▶ `Time zone`) and **deploy the web app** (one time) so the CRM runs as a phone/desktop app; see `DEPLOY.md` . Then run the smoke test in `SMOKE-TEST.md` .

How to fulfill a sale (~60 seconds, repeatable)

1. Open the master → `File` ▶ `Make a copy` → name it `Service Pro CRM` .
2. `Share` ▶ `General access` ▶ `Anyone with the link` ▶ `Viewer` , then copy the link.
3. Deliver the link on the sales platform. The buyer does `File` ▶ `Make a copy` to get their own private, editable copy (the bound script comes with it).

Delivery note: the Apps Script is *container-bound*, so it travels with any copy of the sheet automatically. Buyers authorize it in their own account the first time they open the ⚡ CRM menu;

nothing runs under our account.

Re-skinning for a niche (upsell / variety)

To ship niche editions (e.g. "Lawn Care CRM", "Cleaning Business CRM"):

- Set the accent color + seed services for the niche (Business Settings + the Services tab / price book).
 - Adjust the seed service list in `setup.gs` (`DB_seedServices_`) if you want niche defaults.
 - Rename the master and re-run **Set up / rebuild database**. New listing, same effort. (See `variants/README.md` for the per-edition specifics.)
-

Owner setup checklist (the human parts only you can do)

- ☐ A Google account to hold the master sheet.
- ☐ A Gumroad account (free) **or** Square Online item / Etsy digital listing.
- ☐ Connect payouts (Square/Gumroad → bank).
- ☐ Approve the listing copy in `SALES.md` .
- ☐ Approve price (recommended: **\$69** one-time; **\$149** done-for-you setup tier).

Everything else (building, screenshots, copy, niche variants, support replies) I draft. You approve and collect.
