

Service Pro CRM User Manual

Welcome! Service Pro CRM is a real **app** for your service business (leads, clients, jobs, estimates, invoices, and automatic reminders) that runs entirely in **your own Google account**. No monthly fees, and your data never leaves your Drive.

Total setup time: about 10 minutes, once.

1. How it works (the one thing to understand)

You do your daily work in the **app** (a link you open on your phone or computer). Behind the app is a **Google Sheet** that acts as the database; you rarely need to open it. The  **CRM menu** inside that sheet is only for **one-time setup** and turning on the daily automations.

- **App = daily use** (add clients, schedule jobs, send invoices).
- **Sheet +  CRM menu = setup + automations** (done on a computer, mostly once).

2. First-time setup (do this once, on a computer)

1. Open the copy link from your Start-Here PDF → **File ▶ Make a copy**. The whole CRM (all the code) is now yours, private, in your Google Drive. Nothing to paste.
2. Reload the sheet. A  **CRM** menu appears at the top. Click  **CRM ▶ Set up / rebuild database** and approve the permissions (see the box below).
3. **Set your timezone** so scheduled jobs hit your calendar at the right hour: **Extensions ▶ Apps Script ▶ Project Settings (⚙️) ▶ Time zone** → choose yours.
4. **Turn on your app: Extensions ▶ Apps Script ▶ Deploy ▶ New deployment ▶ (gear ⚙️) Web app** → **Execute as: Me, Who has access: Only myself** → **Deploy** → **Authorize**. Copy the **Web app URL** it gives you. (Full detail + troubleshooting in `DEPLOY.md`.)
5. Open that URL. That's your app. On your phone: browser menu → **Add to Home Screen**.
6. In the app, open **More ▶ Business Settings** and fill in your business name, phone, email, sales tax %, Google review link, and payment link.
7. Back in the sheet,  **CRM ▶ Automations ▶ Turn ON daily autopilot**.

Approving the app: read this first (it looks scarier than it is)

The first time you run setup, Google shows a warning. **This is 100% normal** for any tool that runs inside your own Google account. The exact path:

1. **"Authorization required" → Continue**.
2. **Choose your Google account** (the one that owns this sheet).

3. **"Google hasn't verified this app"** → click the small **Advanced** link (bottom-left).
4. Click **"Go to Service Pro CRM (unsafe)."** *Unsafe* is just Google's generic label for a personal script; it's **your own copy**, running only in **your** account.
5. Review the permissions and click **Allow**.

Why it needs permission: to add jobs to your **Google Calendar**, send your **emails** (follow-ups, invoices, reminders, review requests), save **invoice PDFs** and your **logo** to Drive, and build your **lead form**. It only ever acts inside your own account. You may see the prompt **once more** the first time a new feature is used (e.g. Calendar). Same steps.

On a work/school (Google Workspace) account and don't see **Advanced**? Your admin blocks unverified scripts. Just use a **personal @gmail.com account** instead.

3. Getting around the app

Five tabs across the bottom:

Tab	What it's for
 Home	Your dashboard: new leads, open pipeline, jobs this week, revenue, win rate, lifetime, plus Follow-ups due and This week's jobs . Quick + Lead / + Estimate buttons.
 Clients	Your address book. Every client is a Lead / Active / Inactive / Lost. Tap one to Call , Text , get 📍 Directions , set a follow-up, or start an estimate/job.
 Jobs	Scheduled work: Today / Upcoming / Completed . Add jobs, set a time, reschedule, mark Done.
 Billing	Quotes (estimates), Outstanding (unpaid invoices), Paid , and Closed .
... More	Your Price book (default service prices) and Business Settings .

4. Daily routine (about 2 minutes)

- **New lead calls?** Home → + **Lead** (or Clients → add). Add name, phone, address, and a follow-up date is set automatically.
- **Home ▶ Follow-ups due** shows exactly who to call back today. Tap a client to **Call** or **Text** right from the app.
- Move clients from **Lead** → **Active** as you win the work.

5. Clients & directions

- Tap a client to see their card: phone (**Call / Text**), **address as a link**, plus a 📍 **Directions** button that opens Google Maps directions to their place.
- Their card also shows any **upcoming job**, **open estimate**, or **unpaid invoice**, and totals up their **lifetime spend** automatically.

6. Scheduling jobs (with Google Calendar sync)

- **Jobs** ▶ **+ New job** (or from a client card ▶ **New job**): pick the client + service, set the **date** and a **time** (e.g. 2pm), and an optional **Repeat** (Weekly / Monthly / Quarterly / Annual).
- If **Google Calendar sync** is on (it is by default; **More** ▶ **Business Settings** ▶ **Scheduling**), each scheduled job **automatically appears on your Google Calendar**, with the **client's address as the event location** (tap it for directions). Reschedule or cancel a job and the calendar event **updates or disappears** to match.
- Tap a job to **Reschedule** (new date + time), change **Status** (Scheduled / Done / Cancelled), or **Archive** it.
- **Recurring work**: set **Repeat**, then mark the job **Done**, and the CRM creates the next visit for you (once daily autopilot is on, or via ⚡ **CRM** ▶ **Automations** ▶ **Roll forward finished recurring jobs**).

Timezone matters: calendar event times use your Apps Script timezone (set in step 3). If a 2pm job shows at the wrong hour, fix **Project Settings** ▶ **Time zone**.

7. Estimates → invoices → paid (all in the app)

1. **Create an estimate:** from a client card ▶ **Create estimate**, or **Billing** → new quote. Add line items (each pulls its default price from your **Price book**; you can override the price on any line). Tax comes from your **Sales tax %**.
2. **Send it:** the estimate goes out as a **branded PDF** emailed to the client.
3. **Approve** → **invoice + job**: when the client says yes, open the estimate and tap **Approve** → **invoice + job**. It asks for a **job date and time**, creates a **draft invoice** (with the quoted lines), and **schedules the job** (which syncs to your calendar).
4. **Get paid:** send the invoice (branded PDF), then **Mark paid** when the money's in. The client's **lifetime spend** updates automatically. Put your Stripe/PayPal/Venmo link in **Settings** ▶ **Payment link** to show a **Pay now** button on invoices.

8. Business Settings (More ▶ Business Settings)

- **Business profile:** name, owner email, phone, address (used on PDFs + emails).

- **Money:** currency, sales tax %, invoice payment instructions, payment link, invoice due days.
- **Numbering:** your next estimate # and invoice #.
- **Follow-up & reviews:** default follow-up days, and your **Google review link**.
- **Scheduling:** **Google Calendar sync** (On/Off) and **default job length (hours)**.
- **Appearance:** accent color; and upload your **company logo** for PDFs.

9. Getting more 5-star reviews (the money-maker)

1. Find your review link: Google "**Google review link generator**", or in your Google Business Profile: **Ask for reviews** ▶ **Share review form**.
2. Paste it into **Settings** ▶ **Google review link**.
3. After a job is **Done**, run ⚡ **CRM** ▶ **Automations** ▶ **Send review requests** (in the sheet). Every eligible client with an email gets a friendly, branded ask, **each client only once**.

10. Turn on autopilot (in the sheet)

⚡ **CRM** ▶ **Automations** ▶ **Turn ON daily autopilot**. Every morning after that:

- 🔄 **Recurring jobs** roll forward to their next visit.
- 🚩 **Overdue invoices** get flagged.
- 🔔 You get your **follow-up list** emailed (with a tap-to-text link per client).
- 📅 **Appointment reminders** email clients scheduled for the next day.

Turn it off anytime with **Turn OFF daily autopilot**.

Capture leads from your phone: run ⚡ **CRM** ▶ **Create mobile lead-capture form** once → you get a Google Form link (bookmark it / put it on flyers). Every submission drops straight into your **Clients** list as a new Lead.

11. Tips & limits

- **The ⚡ CRM menu is computer-only** (it lives in Google Sheets in a browser). Do setup and automations there. **Everything else is in the app**, which works great on your phone.
- **Emails, not texts:** reminders and review requests are sent by **email**. Apps Script can't send SMS. (You can still tap **Text** on a client to text from your own phone.)
- **Email limit:** a normal Gmail account sends ~100 automated emails/day; Google Workspace ~1,500.
- **Back up anytime:** File ▶ Make a copy.
- **Timezone:** if calendar times look off, set **Apps Script** ▶ **Project Settings** ▶ **Time zone**.

12. Help

Stuck? Reply to your purchase receipt and we'll help you get running, usually same day.
