

Training video scripts: Service Pro CRM

Tight, ready-to-record scripts for Loom / YouTube (or your phone). Each is short on purpose. Buyers watch short videos. Screen directions are in **[brackets]**; the spoken lines follow. These match the current **app-first** build (Home / Clients / Jobs / Billing / More).

Video 1: "Set up in 10 minutes" (≈3:00)

[Screen: the Start-Here PDF / the copy link] "Welcome to Service Pro CRM. In about ten minutes you'll have your whole service business running from a real app on your phone. Let's set it up. You only do this once."

[Click the copy link → File ▶ Make a copy] "Open your link and click File, Make a copy. That's it. The entire app is now yours, private, in your own Google account. Nothing to install, nothing to paste."

[Reload → ⚡ CRM menu → Set up / rebuild database] "Reload the sheet and you'll see this ⚡ CRM menu. Click Set up / rebuild database. The first time, Google asks you to authorize. That's just because it's YOUR copy in YOUR account. Click Advanced, then Go to Service Pro CRM, then Allow."

[Extensions ▶ Apps Script ▶ Project Settings ▶ Time zone] "Quick but important: set your timezone here, so scheduled jobs land on your calendar at the right hour."

[Deploy ▶ New deployment ▶ Web app → Execute as Me, Only myself → Deploy → copy URL] "Now turn on the app: Deploy, New deployment, pick Web app, set Execute as Me and access to Only myself, Deploy, and copy this link. That link is your app. Open it, and on your phone, Add to Home Screen."

[In the app: More ▶ Business Settings] "Last thing: open Business Settings in the app and fill in your name, phone, tax rate, review link, and payment link. You're live."

Video 2: "Your daily routine" (≈2:00)

[App: Home tab] "This is your home screen. New leads, your open pipeline, jobs this week, revenue, win rate. Down here, Follow-ups due: exactly who to call back today."

[Tap + Lead / add a client] "A customer calls? Tap + Lead, add their name, phone, and address; a follow-up date is set automatically."

[Clients tab → open a client → Call / Text /  Directions] "Open any client and you can Call or Text them right here, or tap Directions to get Google Maps directions straight to their door. Handy when you're headed to a job."

[Jobs ▶ + New job → set date + time] "Scheduling a job? Pick the client and service, set a date and a time. Watch this."

[Switch to Google Calendar, show the event] "It shows up automatically on your Google Calendar, with the client's address as the location. Reschedule in the app and the calendar updates itself. No double entry."

Video 3: "Estimate → paid, and get reviews" (≈2:15)

[App: client card → Create estimate → add line items] "From a client, tap Create estimate and add your services. Prices auto-fill from your price book, and you can override any line. Tax is added for you."

[Send estimate] "Send it, and the client gets a clean, branded PDF estimate."

[Open estimate → Approve → invoice + job → set date + time] "When they say yes, tap Approve. It creates a draft invoice from the quote AND schedules the job. It even asks for the date and time, which syncs to your calendar."

[Invoice → Mark paid] "Send the invoice, and when you're paid, tap Mark paid. The client's lifetime spend updates automatically."

[Sheet: ⚡ CRM ▶ Automations ▶ Send review requests + Turn ON daily autopilot] "Here's the money-maker. After a job's done, Send review requests: every happy client gets a friendly email with your Google review link. Turn on daily autopilot and your review requests, follow-up reminders, appointment reminders, and overdue flags all run by themselves."

Recording tips

- Record on a **fresh copy** with a little demo data so the dashboard looks alive.
- Use a **phone-width** window for the app portions (it's a mobile-first app).
- Keep each video **under 3 minutes**; link all three from your listing.

Thumbnail / title ideas

- "Run your service business from a \$69 app (no monthly fees)"
- "The CRM that auto-syncs jobs to your Google Calendar"

- "Set up your whole CRM in 10 minutes: full walkthrough"
