

⚡ YOUR DOWNLOAD IS READY

Welcome to Service Pro CRM

Thank you for your purchase! You're about 10 minutes away from running your whole business from a real app that lives in your own Google account. Let's set it up.

👉 **Click here to get your CRM**

Opens Google Sheets, then choose "Make a copy"

Button not working? Paste this into your browser:
{{COPY_LINK}}

— Set up in ~10 minutes (on a computer)

- 1 Open the link above and click **File** ▶ **Make a copy**. The whole CRM is now **yours**, private, in your own Google Drive. (All the code comes with the copy; nothing to paste.)
- 2 Reload the sheet. A ⚡ **CRM** menu appears at the top. Click ⚡ **CRM** ▶ **Set up / rebuild database**, then approve the one-time Google permission (see the note below; the warning screen is normal).
- 3 **Set your timezone** so scheduled jobs land on your calendar at the right time: **Extensions** ▶ **Apps Script** ▶ **Project Settings** (⚙️) ▶ **Time zone** → pick your zone.
- 4 Turn on your app: **Extensions** ▶ **Apps Script**, then **Deploy** ▶ **New deployment** ▶ **(gear) Web app**. Set **Execute as: Me** and **Who has access: Only myself**, click **Deploy**, and **Authorize**. Copy the **Web app URL** it gives you.
- 5 Open that URL. This is your app. On your phone, use your browser menu to **Add to Home Screen**. Fill in **Settings** right in the app, then add a client and build a quote.
- 6 Back in the sheet, ⚡ **CRM** ▶ **Automations** ▶ **Turn ON daily autopilot** for automatic follow-ups, appointment reminders, and review requests.

— What's included

- | | |
|-------------------------------------|-----------------------------------|
| ✓ A real app for phone & computer | ✓ Leads pipeline + dashboard |
| ✓ Estimates → invoices in one tap | ✓ Itemized PDF invoices + tax |
| ✓ Jobs auto-sync to Google Calendar | ✓ One-tap Maps directions to jobs |
| ✓ Recurring jobs & scheduling | ✓ Auto Google-review requests |
| ✓ Follow-up + reminder emails | ✓ Client book with auto totals |

Seeing "Google hasn't verified this app"? That's normal. Because everything runs inside *your own* Google account, Google shows a warning during setup. Click **Advanced** → **Go to Service Pro CRM (unsafe)** → **Allow**. It's your own

copy; your data never leaves your Drive. (Work/school account with no "Advanced" link? Use a personal @gmail.com account.)

Opening the app on a computer: if you get a Google Drive "unable to open the file" error, you're signed into more than one Google account. Open the app link in an Incognito window signed into just the account that owns the sheet (or make it your default account). Full deploy help is in the included guide.

 **Your data & privacy:** everything stays inside your own Google account: your customer data is **never sent to any AI or third party**, and no one else (not even us) can see it. Keep your sheet private; don't share it "anyone with the link." Full guidance is in the included guide.

Need a hand? Reply to your order message and we'll help you get running, usually same day. Your full user manual and quick tips are in the included guide.
