

Turn on your app: 6 taps

Do this once, on a computer, to get your app link. After that you just open the link (add it to your phone's home screen). It all runs in **your own** Google account.

1 Open the code editor

In your sheet's top menu: **Extensions** → **Apps Script**. It opens in a new tab.

2 Start a deployment

Top-right blue button: **Deploy** → **New deployment**.

3 Choose "Web app"

Click the  **gear** (Select type) → pick **Web app**.

4 Set who can use it

Execute as: Me · **Who has access:** Only myself.
(Keeps it private to you.)

5 Deploy & allow

Deploy → **Authorize access** → **Allow**. The "hasn't verified / unsafe" screen is normal. It's your own copy.

6 Copy your app link

Copy the **Web app URL**. Open it. That's your app.
On your phone: browser menu → **Add to Home Screen**.

✅ **Done. That link is your CRM. Reload it any time.**

 **Set your timezone once** so scheduled jobs hit your calendar at the right hour: **Apps Script** ▶ **Project Settings** () ▶ **Time zone** → pick yours.

Can't find the link again? In your sheet: ⚡ **CRM** ▶  **Open the app (get link)** shows it anytime.

On a computer and see "unable to open the file"? You're signed into more than one Google account. Open the app link in an **Incognito window** signed in with just the account that owns the sheet (or make that account your default).
