

Niche variants

The engine (`../Code.gs`) is shared. A niche edition is just a different **CONFIG block** at the top of the script, so one bug fix covers every variant.

Current variants

Variant	Product name	Accent	Config file
Universal	Service Pro CRM	Amber <code>#b8823a</code>	(default in <code>Code.gs</code>)
Cleaning	Cleaning Business CRM	Teal <code>#2f9e9e</code>	<code>cleaning.gs</code>
Lawn Care	Lawn Care CRM	Green <code>#4f8f3a</code>	<code>lawncare.gs</code>

Fulfilling a variant sale (~3 min)

1. Make a copy of the Universal **master** sheet → rename it (e.g. "Cleaning Business CRM MASTER").
2. `Extensions` ▶ `Apps Script` . In `Code.gs` , delete the existing `CONFIG = { ... }` block and paste the variant's block from the matching file here.
3. Reload the sheet → ⚡ `CRM` ▶ `Set up / rebuild database` . The whole product re-skins: dashboard title, accent color, and service dropdowns all update.
4. Fulfill the sale as usual (copy → share link → deliver).

Adding a new niche later

Copy `cleaning.gs` , change `productName` , the two accent colors, and the `services` list. That's a whole new product in about 2 minutes.
